Commissioner's note

Office Memo,

Sub Breaching of Agrahar Tank (near Binny Mills)

While recording the report of the Commissioner regarding action taken in the matter of breaching Jakkarayankere (which was the source of raw water supply to the Maharaja Mills and in which connection the Chief Engineer had arranged for supply of raw water by pipe line from the main connecting Hessaraghatta tank), the Municipal Council passed a resolution (on 29-1-48) that similar action should be taken in the matter of Agrahar tank as this was the source of and reason for much of the insanitary condition prevailing in Pensionmohalla and Cheluvadipalya, and that the Binny Mills (to which this tank was a source of raw water supply) should be given pipe supply of raw water, as in the case of the Maharaja Mills

On this resolution I had discussed the matter with the Chief Engineer for Irrigation (Sri M Narasimhaiah) and urged the need for early action in this respect The Chief Engineer, after considering the matter, told me that the raw water required by the Binny Mills would be about three or four times the quantity used by the Maharaja Mills, that though a good amount of the water from Hesaraghatta was used for raw water supply, a portion was still being filtered to supplement the supply from A G halli and that arrangements for giving raw water by pipe connection to the Binny Mills would be possible only after the duplicate main line from A G halli had been completed, this work now being in the last stage

The matter may kindly be placed before the Council for information The subject will have to be taken up again soon after the duplicate main from A G halli is completed

Proceedings of the meeting of the Bangalore City Municipal Council dated 29-1-1948

Subject No 14 Letter from the Engineer, City Improvement Trust Board, re the breaching of the water-weir of the Jakkarayanakere to deplete the standing water Also Chief Engineer's letter in the matter

---

The Commissioner informed that this was an urgent subject subject pending from a long time and that the Chief Engineer having promised to supply raw water to the mills, it was agreed to breach the Jakkarayanakere and remove the stagnation of water in the tank He said further that this would greatly improve the health and sanitation of the surrounding localities viz , Malleswaram, Seshadripuram and other adjacent localities He also suggested that the breaching of Agrahara tank was very necessary to improve the health and sanitation of Cheluvadipalya, Kempapur Agrahar and Pension Mohalla

Sri S K Venkataranga Iyengar said that in view of the circumstances explained by the Commissioner it would be better to take action to breach the Agrahar tank also which was at present a great source of malaria

Sri R Subbanna said that the Binny Mill authorities had entered into an agreement with the Municipality and as they have been enjoying the lease rights, it would be better to study the file in detail before passing a resolution on the subject

Sri Pujadalaiah said that immediate action might be taken to breach the tank and drain the water to the outskirts of Bangalore City He further said that permission should not be given to use this water for growing grass and other vegetables

Then Sri Keshava Iyengar moved the following resolution

"This Council, while conveying its approval to the breaching of the waste-weir of the Jakkarayanakere to improve the health and sanitation of Seshadripuram and other adjacent localities, further resolves to breach the Agrahara tank also and improve the health and sanitation of Cheluvadipalya, Pension Mohalla and other adjoining localities and authorise the Commissioner to take suitable immediate action and complete the scheme within six months"

Sri R Subbanna seconded the resolution and was passed unanimously

Sd K Shamaraja Iyengar,
Honorary President

Sir

Breaching of A-grahara tank (near Bin... Mills), Bangalore

SECTION TO GOVT OF MYSORE
No
Date
GENERAL DEPARTMENT

With reference to your letter No L 12028 dated 2(requesting me to furnish opinion on the above subject, I w forward herewith for favour of your perusal a copy of letter 1598 dated 23-5-1949 received from the Executive Engineer, Wate Supply Division, stating that the duplication of the Chamarajas Rising Main is expected to be completed by June 1950 and that it is not desirable to have any additional commitments until certain improvement works are taken up

An estimate amounting to Rs 39 00 lakhs for the ~~duplication~~ development of Chamarajasagar Station up to 15 to 16 M G D has been forwarded to the Secretary to Government, P W D Bangalore, for obtaining sanction of Government thereto

The breaching of A-grahara tank may be taken up after watching the progress of the work of the duplication of the Rising main after June 1950 and after the filtration plant for the supply of water to 15 to 16 M G D is installed

Yours faithfully,

ksr

Chief Engineer for Irrigation

Letter No 1598 dated 23-5-1949 from the Executive Engineer, Water Supply Division, to the Chief Engineer for Irrigation, Bangalore

Breaching of Agrahara tank

With reference to your No 11157-I dated 7-5-49, I write to state that the work on the duplication of main from Chamarajasagara to Bangalore is not yet completed The line from 7/1 to Bangalore is completed but the Guard Rings for the protection of lead joints has to be fixed from 7/1 to 8/3 This work can be completed only after the rings are received from the Iron Works The supply will be completed by June 1950 The line from 0 to 6/1 is also not complete as two specials required are not yet received from Mysore Iron and Steel Works Further this portion also requires Guard Rings and this may also be completed by June 1950

However by taking 2 more miles of duplicate main into service i e from 1/4 to 8/5 and by working 3 pumps it is possible to pump 10 8 million gallons daily and with the addition of 1 3 million gallons from Hesserghatta the total supply will 12 1 million gallons During this summer it is seen that the daily issues varies between 10 and 11 million gallons and it is likely that the demand in the coming summer will be heavier still Further to pump 10 8 million gallons daily to Bangalore, the quantity of water to be treated at Chamarajasagara will be nearly 12 million gallons and the present equipment is for filtering only 10 000 million gallons Till improvement works as contemplated in the estimate submitted for 36 lakhs are taken up, it is not desirable to have any additional commitments
